

Ok Basically im gonna help you guys create a deface page.

First thing i suggest you download is Notepad++ If you dont have that, You can use notepad but it wont look tidy.

You can use this so you can clearly know if you did any mistakes :D

<http://htmledit.squarefree.com/>

Link:

<http://notepad-plus-plus.org/download/v5.9.6.2.html>

Use the installer package, after you install, Go to the top shit, Click "Language" Then find "H" Then Click "HTML" There is also no difference if you not do that but its recomended for tidyness.

Here is the definition of what we will use and how does it look like.

```

1 <HTML>
2 <HEAD>
3
4 </HEAD>
5 <BODY>
6
7 <H1 align="center" style="color: #339900"> Now as you can see the alignment is where
8 you want to put the text, There's "Left", "Right" And "Center" Forgive me if i did
9 not list anymore, H1 Starts for Heading One, This is the largest heading, You can add more H1's
10 But if you add H2 Which is heading two, The text will be a bit smaller, There's From H1 To H6. Always use "color" and not "colour"
11 This will change the whole shit and may not work, If you want more colors to choose go to google.com and type HTML Colours But at
12 im using 339900 Which is green, There are alot of colors to choose, now remember to close the brackets like this </H1>
13
14 <H1 align="center" style="color: #339900"> Okay this heading is about the (BR) Down i will not say it as a <> because then it will do
15 what its supposed to do, BR Stands for Break, I usually use this to make lines :D Its like using "enter" in a notepad :P If i use
16 (BR) (BR) (BR) Then it will go down 3 lines <H1>
17
18 <br><br><br><br>
19
20 <H2 align="left" style="color: #339900"> Look at the align="left", That will make the text begin from the left hand side.
21 The H2 Will now make the text smaller a bit not by much though, May not even be noticable, But if you use H6
22 You will see theres a huge difference as i will do now </H2>
23
24 <br><br><br><br>
25
26 <H6> I BET YOU CANT EVEN READ THIS LOL </H6>
27
28 <br><br><br><br>
29
30 <H3> So maybe you can read it depending on you're screen resolution, Do not worry about these spaces in the notepad, This does not
31 effect anything, Its jut to make it look tidy. You can press "Tab" in your keyboard to make a space this large " "
32 Now ill stop with these headings and begin with the deface page :D
33
34 </BODY>
35 </HTML>

```

This is basically how your code will be without the inputs that I'm gonna include in the other pictures.

```
<HTML>  
  <HEAD>  
    <TITLE> Hacked By Noob </TITLE>  
  </HEAD>  
  <BODY>  
    <H1 align="center" style="color: #339900"> ...This Site Has Been Hacked By Noob:... </H1>  
  
    <H2 align="center" style="color: #339900"> To Prevent Furhter Attacks, Update Security <H2>  
  
    <br><br><br><br>  
  
    <H4 align="center" style="color: #339900"> Remember you can make as many headings as you like! with Bold and Italic  
      As i explained in the other picture. </H2>  
  
    <br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br><br>  
  
    <H6> All Rights Reserved By Noob </H6>  
  
  </BODY>  
</HTML>
```

Now ill post a javascript which you can add instead of these headings, Well it would be better if you could keep H1 in the top and then this in the bottum just like this deface page that i have done.

Link:

<http://pastehtml.com/view/bhp2g9yok.html>

This quoted message is what you should add in your HTML Code,

Quote:

<html>

<head>

<title>Hacked by Noob</title>

```

</head><center>
<body onLoad="type_text()" ; text=white>
<body style="cursor:crosshair">
<script language="Javascript">
<!--
var tl=new Array(
" // Finding Loophole In Security... \n Loophole Found! \n \n // Testing For Vulnerabilities... \n Site Is
Vulnerable! \n \n // Injecting Site... \n Site Injected! \n \n // Shelling Site... \n Site Shelled! \n \n // Uploading
Deface... \n Deface Uploaded! \n \n \n \n Unfortunately, your site has been hacked. Don't worry, everything
is untouched. But you may wanna upgrade your security before potential data is lost or stolen. \n \n \n -Team
DemiZe - iAndroid Signing Off"
);
var speed=100;
var index=0; text_pos=0;
var str_length=tl[0].length;
var contents, row;

function type_text()
{
contents="";
row=Math.max(0,index-20);
while(row<index)
contents += tl[row++] + "\r\n";
document.forms[0].elements[0].value = contents + tl[index].substring(0,text_pos) + "_";
if(text_pos++==str_length)
{
text_pos=0;
index++;
if(index!=tl.length)
{
str_length=tl[index].length;
setTimeout("type_text()",1500);
}
} else
setTimeout("type_text()",speed);
}
//-->
</script>
<p align="center">
<form><textarea style="background-color:black;color:white;" name="about" readonly="readonly"
rows="23" cols="60"
wrap="soft"></textarea></form></p>

</div>
<br><br><br><br><br><br><br><br><br><br><br><br>

</font></center>
<center><font color=white size=5> iAndroid </font></center>
</center>
</html>

```

Now this is another javascript which i like the most , The letters fly !

<http://pastehtml.com/view/bhp2k7f9w.html>

Here is it in a quoted message. (The WhyTry Function helps you to protect you're source in some web browsers, If you want to fully protect your source, Encrypt the HTML Code after you have done everything.)

Quote

```
:<script language="JavaScript"> var message="Why Try?"; function clickIE4(){ if (event.button==2){
alert(message); return false; } } function clickNS4(e){ if
(document.layers||document.getElementById&&!document.all){ if (e.which==2||e.which==3){
alert(message); return false; } } } if (document.layers){ document.captureEvents(Event.MOUSEDOWN);
document.onmousedown=clickNS4; } else if (document.all&&!document.getElementById){
document.onmousedown=clickIE4; } document.oncontextmenu=new Function("alert(message);return
false") </script>
<body bgcolor="black"/>
<center> <font color=#00ff00 size=20 ALIGN=right id="fly">
--$
Hello World, This Site Has Been Hacked By $
//Noob$
--$
</font>
<center>
<script type="text/javascript">
message = document.getElementById("fly").innerHTML; // $ = taking a new line
distance = 50; // pixel(s)
speed = 100; // milliseconds
var txt="",
num=0,
num4=0,
flyofle="",
flyofwi="",
flyofto="",
fly=document.getElementById("fly");
function stfly() {
for(i=0;i != message.length;i++) {
if(message.charAt(i) != "$")
txt += "<span style='position:relative;visibility:hidden;' id='n'+i+'>" + message.charAt(i) + "</span>";
else
txt += "<br>";
}
fly.innerHTML = txt;
txt = "";
flyofle = fly.offsetLeft;
flyofwi = fly.offsetWidth;
flyofto = fly.offsetTop;
fly2b();
}
function fly2b() {
if(num4 != message.length) {
if(message.charAt(num4) != "$") {
var then = document.getElementById("n" + num4);
then.style.left = flyofle - then.offsetLeft + flyofwi / 2;
then.style.top = flyofto - then.offsetTop + distance;
fly3(then.id, parseInt(then.style.left), parseInt(then.style.left) / 5, parseInt(then.style.top),
parseInt(then.style.top) / 5);
}
num4++;
```

```

setTimeout("fly2b()", speed);
}
}
function fly3(target,lef2,num2,top2,num3) {
if((Math.floor(top2) != 0 && Math.floor(top2) != -1) || (Math.floor(lef2) != 0 && Math.floor(lef2) != -1)) {

if(lef2 >= 0)
lef2 -= num2;

else
lef2 += num2 * -1;
if(Math.floor(lef2) != -1) {
document.getElementById(target).style.visibility = "visible";
document.getElementById(target).style.left = Math.floor(lef2);
} else {
document.getElementById(target).style.visibility = "visible";
document.getElementById(target).style.left = Math.floor(lef2 + 1);
}
if(lef2 >= 0)
top2 -= num3
else
top2 += num3 * -1;
if(Math.floor(top2) != -1)
document.getElementById(target).style.top = Math.floor(top2);
else
document.getElementById(target).style.top = Math.floor(top2 + 1);
setTimeout("fly3 '"+target+"','"+lef2+"','"+num2+"','"+top2+"','"+num3+"'",50)
}
}
stfly()
</script>

```

How To Add Youtube links!

```

<embed src="http://www.youtube.com/v/wbqa6fhQ&autoplay=1" type="application/x-shockwave-flash"
wmode="transparent" width="1" height="1"></embed>

```

Just put the song of the youtube link instead of that one but leave the &autoplay=1 there, Do not remove that or else it will not work. And if you have a specific VIDEO You want to add in just go to the link in youtube, Right-click the screen and Copy Embed Source, Or if im incorrect im sure you can find it easily, And if this code above that i explained wont work, Simply just go to the youtube link, Right-Click, Copy embed, Then paste in the body usually, And put width and height as "1" for both so it doesnt now show. Autoplay must appear!

Now these are some cursors you can add.

Quote:

HTML cursor codes - "Auto"

HTML cursor codes - "Default"

HTML cursor codes - "Text"

HTML cursor codes - "Help"

HTML cursor codes - "Pointer"

HTML cursor codes - "Wait"

HTML cursor codes - "Crosshair"

HTML cursor codes - "Move"

HTML cursor codes - "Smile"

HTML cursor codes - "Progress"

HTML cursor codes - "e-resize"

HTML cursor codes - "ne-resize"

HTML cursor codes - "nw-resize"

HTML cursor codes - "n-resize"

HTML cursor codes - "se-resize"

HTML cursor codes - "sw-resize"

HTML cursor codes - "s-resize"

HTML cursor codes - "w-resize"

This is how you use it <body style="cursor:crosshair"> </body>

How to add pictures:

I do it my way, I save any picture i want, i upload it to [Photobucket.com](http://photobucket.com) then i click embed source to copy, And i just paste it but with <center> . For example :

Quote:

<center>

I hope you guys atleast learnt something from this program and please notify me if i did any mistakes!

Thanks
